

## Centre for Marine Socioecology Interdisciplinary School 2025 Informing and achieving equitable ocean futures: Training the next generation of interdisciplinary marine researchers

The CMS Interdisciplinary School is a one-week training course designed to equip post-graduate students and early-career researchers from diverse disciplines with knowledge and skills to conduct effective interdisciplinary and transdisciplinary research in the context of ocean sustainability.

Internationally-recognised experts from across the marine natural and social sciences, will deliver this training. Participants will gain:

- a basic overview of the diversity of disciplines in marine research
- an understanding of equity and justice as they relate to ocean sustainability
- skills in using AI to assist with research
- fundamental science communication skills
- preparatory skills to engage and co-deliver research with marine stakeholders and research end-users.
